

Warehouse gate-course showdown
XPU-RT (100 Hz control) clears all 4 gates · ROS (50 Hz) loses stability → crash

① ROS · clears gate G1 · $t=2.2s$

② ROS · loses stability → crash · $t=9.0s$

③ XPU-RT · barely clears crate (0.66 m) · $t=6.6s$

④ XPU-RT · gate G4 + person · $t=9.8s$

Onboard K1 schedule — XPU-RT shards YOLO across 8 cores (~45 Hz); ROS serial on 1 hart backs up (~15 Hz) → control starves
